Art Unit: 3735

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 8-10, drawn to a heat transfer catheter flow system, classified in class 607, subclass 104.
- II. Claims 18-22, drawn to a heat transfer catheter, classified in class 607, subclass 107.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP§ 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it doe snot require the details of the catheter. The subcombination has separate utility such as a heat exchange catheter.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP§821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may

Application/Control Number: 10/645,891

ion, control (talliber: 10/0

Art Unit: 3735

be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

During a telephone conversation with Mr. John Fitzgerald on September 21, 2006 a provisional election was made without traverse to prosecute the invention of group I, claims 8-10. Affirmation of this election must be made by applicant in replying to this Office action. Claims 18-22 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Application/Control Number: 10/645,891

Art Unit: 3735

inc. 57 55

The application has been amended as follows:

In the specification:

On page 1, in the section added via preliminary amendment, line 2, the following has been added after 2000: -- now US patent 6620189 --.

Claims 18-22 have been canceled as being drawn to an invention that was nonelected without traverse.

The following is an examiner's statement of reasons for allowance. Claims 8-10 define over the art in that none of the art controls the speed of the pump in response to a measured back torque of the motor. The examiner notes that it is well known that back torque of back electromotive force is a measure of the speed of a pump and that it is known to control the speed of pumps. In addition, Fontenot 5174285 or 5344436, has a cartridge having a pump head that is inserted into a heat exchanger that supplies fluid to a heating pad. In addition, Saab 5624392 shows a heat exchange catheter that has fluid supplied to it. Therefore, each of the elements of the present invention is individually known. However, there is no motivation to modify a Fotentot/Saab combination to control the pump speed based on a back torque measured in the engine, as claimed.

The examiner notes that there is a minimal disclosure on this topic, only that the pump speed can be controlled based on the back torque. However, it is the examiner's

Application/Control Number: 10/645,891

Art Unit: 3735

position that the disclosure is sufficient for one skilled in the art to make and use the invention, as measuring back torque and controlling a pump speed via feedback are well known in the art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert L. Nasser whose telephone number is 571 272-4731. The examiner can normally be reached on m-f 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles Marmor II can be reached on 571 272-4730. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
